

New spa key synchronisation instructions

1. Connect your pump to a power outlet.
2. When the pump is plugged in to a power point, it will automatically go into synchronize mode once power is activated.
3. While the pump is in synchronize mode, push the pump start button on the remote once. This is the top left button, **(Refer to above Image)**.
4. The pump will not start until the synchronize process is complete. The synchronize time will last for 15 seconds and you can program multiple remotes to the same pump.
5. After the pump and remote have been synchronized and the 15 seconds has ended the pump will start for one second to confirm that the synchronized cycle has finished.
6. The remote is now synchronized to your pump, test this by pressing the top left on/off button.

NOTE: The remotes do not need to be re-synched if the battery is replaced.

7. Additional Spa-Key remotes can be ordered with Edgetec Part # 6650.
